WPI; 2004-420299/39. N-PSDB; ADO48478.

New nucleic acid fragment encoding a PAIGB polypeptide, useful in preparing a composition for diagnosing, treating or preventing bone related disorders, e.g., osteoporosis.

Claim 9; SEQ ID NO 8; 169pp; English.

The invention relates to a novel PTH responsive gene (PAIGB) fragment encoding a polypeptide. The invention further comprises: a chimeric construct comprising the isolated nucleic acid fragment operatively linked to suitable regulatory sequences; a host cell transformed with the chimeric construct; a vector comprising the nucleic acid fragment; obtaining a nucleic acid fragment encoding the polypeptide; a method for obtaining a polypeptide; detecting the presence of the nucleic acid fragment; an antibody that specifically binds to one or more epitopes of a PAIGB polypeptide; a composition for regulating bone-forming activity in a mammal comprising the nucleic acid fragment, polypeptide or antibody; an agent that alters the expression of PAIGB gene or polypeptide;

CC fragment; an antibody that specifically binds to one or more epitopes of in a mammal comprising the nucleic acid fragment, polypeptide; a composition for regulating bone-forming activity in a mammal comprising the expression of PAIGB gene or polypeptide; a composition of PAIGB gene or polypeptide; a card fragment, polypeptide; an agent that alters the expression of PAIGB mRNA; cc determining agents for effectiveness in altering expression of the nucleic acid fragment; screening for agents useful for treating bone related cd disorders; evaluating the efficacy of a treatment of a bone related cd disorders; evaluating the effectiveness of treatment of a subject with a bone related given the study of bone density modulation comprising the DNA; an animal model companies composed of the transgenic animal comprising the modulation of bone mass; studying bone mass determinants; studying the modulation of bone dass; studying an effect of PAIGB on bone disorders; identifying an agent for treating bone related disorders; identifying whether an agent which has bone forming activity; and a stably transfected cell line comprising two constructs, the first construct comprising a ligand binding domain clinked to a DNA binding domain which is linked to an activation domain construct comprising multiple copies of DNA binding elements linked to a construct composition for paige gene is induced. The PAIGB polynucleotide has osteopathic activity. The PTH responsive gene may be related disorders, e.g., osteoporosis. This sequence represents a PTH cresponsive gene protein of the invention.
                                                                                                                                                                                                                                                                                                                                                    Matches 141;
                                                                                                                                                                                                                Query Match

                                                                                                                                                                                                                                                                                                                               sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the oligonucleotide which comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH13633 to AAH13742 represent human cDNA sequences; AAB92446 to AAB95893 represent human amino acid sequences; and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises:
(a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotide; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to the

                                                                                                                                                                                                                                                                       The present invention relates to the use of expressed sequence tags (RSTB), or variants, of the unigene cluster HS169395 (HS1), HS127144 (HS2) and/or HS132793 (HS3) for diagnosis and therapy of tumours, in which their expression rates in tumour cells and/or lymph nodes are determined. The EST sequences are useful as prognostic markers of survival of cancer patients (high levels of EST-related mRNA are associated with a poor prognosis, specifically correlated with development of metastases); and for diagnosis and/or therapy of solid tumours, particularly of colon, stomach and breast. The present sequents a variant of the HS1 protein shown in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                            Diagnosis and therapy of tumors, specific expressed sequence tags blocking their expression.

cc related gene nucleotide sequences which encode the proteins given in Cc ABR59521 to ABR59709. Also described: (1) determining the presence or cc absence of a pathological cell in a patient; (2) an expression vector cc comprising a nucleic acid molecule described above; (3) a host cell comprising the vector; (4) an isolated polypeptide, which is encoded by cc comprising the vector; (4) an isolated polypeptide, which is encoded by cc comprising the vector; (4) an isolated polypeptide, which is encoded by cc comprising the vector; (4) an isolated polypeptide, which is encoded by cc of (4); (6) specifically targeting a compound to a pathological cell in a cc patient by administering to the patient the antibody above; and (7) a cc drug screening assay. The nucleic acid is useful as diagnostic markers or therapeutic targets. In particular, the nucleic acid is useful for cd diagnosing a pathology, e.g. cancer (e.g. cancer of the bone marrow, cc diagnosing a pathology, e.g. cancer (e.g. cancer of the bone marrow, cc bladder, brain, breast, cervix, colon/rectum, kidney, lung, ovary, cc pancreas, prostate, skin and uterus), wounds, ischaemia, heart diseases, atherosclerosis and endometriosis. The nucleic acid is also useful in contact of the contact of the second contact of the cont

20; SEQ ID NO 1882; 1185pp; English.

The invention relates to 971 novel human cDNA sequences (ADC29919-CC ADC30889) and the polypeptides they encode (ADC30899-ADC31860). The invention also relates to nucleic acid sequences over 99% identical with the novel human cDNAs. The invention additionally encompasses expression vectors and host cells comprising a nucleic acid of the invention; the recombinant production of a polypeptide of the invention; an antibody against a polypeptide of the invention; an antibody against a polypeptide of the invention; and methods of collecting of identifying a compound which binds to a polypeptide of the invention. The invention further discloses methods of peventing, treating or andlorating a medical condition, kits comprising polynucleotide probes and/or monoclonal antibodies for carrying out the methods of the invention; methods for the identification of compounds that modulate the expression or activity of the polynucleotide and/or polypeptide; and 767 contic semences corresponding to the countries of the invention. contig sequences corresponding to the cDNA sequences of the invention (ADC31861-ADC32627) and the polypeptides encoded by the contigs (ADC32628 - ADC3394). The nucleic acids and polypeptides of the invention are useful in diagnostics, drug screening, forensics, gene mapping, in the identification of mutations responsible for genetic disorders or other traits, for assessing biodiversity, and in producing many other types of data and products dependent on DNA and amino acid sequences. They are also used for treating diseases such as Parkinson's disease, Alzheimer's disease and other neurodegenerative diseases, anaemia, platelet disorders, wounds, burns, ulcers, osteoporosis, autoimmune diseases or cancer. The nucleic acids may also be used as hybridisation probes or primers, and in the recombinant production of a protein. The polypeptic polypeptides

The invention relates to a method of characterizing acute myelogenous leukemia (AML) in a patient by assaying for the overexpression of one or more BAALC transcripts in cells obtained from the patient, where an overexpression indicates that the patient has an aggressive form of AML. The methods, kits and probes are useful for characterizing acute or chronic myelogenous leukemia, or prostate cancer. They are also useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        are also useful in generating antibodies, as molecular weight markers, and as food supplements. The present sequence represents a specifically claimed human polypeptide sequence of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                     Characterizing acute or chronic myelogenous leukemia, of in a patient comprises assaying for the overexpression BAALC transcripts in cells obtained from the patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             acute myelogenous leukemia;
chronic myelogenous leukemia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   03-JUN-2004
                                                                                                                                                                                    Disclosure;

The invention relates to a novel PTH responsive gene (PAIGB) fragment encoding a polypeptide. The invention further comprises: a chimeric construct comprising the isolated nucleic acid fragment operatively linked to suitable regulatory sequences; a host cell transformed with the chimeric construct; a vector comprising the mucleic acid fragment; obtaining a nucleic acid fragment encoding the polypeptide; a method for obtaining a polypeptide; detecting the presence of the nucleic acid fragment; an antibody that specifically binds to one or more epitopes of a PAIGB polypeptide; a composition for regulating bone-forming activity in a mammal comprising the nucleic acid fragment, polypeptide or antibody; an agent that alters the expression of PAIGB gene or polypeptide; determining whether an agent alters the expression of pAIGB mRNA; acceeding agents for effectiveness in altering expression of the nucleic acid fragment; screening for agents useful for treating bone related
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New nucleic acid fragment encoding a PAIGB polypeptide, useful preparing a composition for diagnosing, treating or preventing related disorders, e.g., osteoporosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           for detecting BAALC overexpression. This sequence corresponds to a BAALC (Brain and Acute Leukemia, Cytoplasmic) protein encoded by an alternative spliced RNA consisting of exons 1, 6 and 8.
                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CC disorders; evaluating the efficacy of a treatment of a bone related CC disorder in a subject; identifying polypeptides capable of binding to CC PAIGB; monitoring the effectiveness of treatment of a subject with a bone CC related agent; a transgenic animal comprising the DNA; an animal model CC for the study of bone density modulation comprising a first group of CC animals composed of the transgenic animal and a second group of control CC animals; studying bone mass determinants; studying the modulation of bone CC mass, studying an effect of PAIGB on bone disorders; identifying an agent which has bone forming activity; and a stably transfected cell line comprising CC linked to a DNA binding domain which is linked to a DNA binding domain which is linked to a DNA binding domain which is linked to an activation domain CC all of which expression is driven by a constitutive promoter, the second CC minimal promoter which is linked to PAIGB cDNA, where upon the addition of chemical inducer, transcription of PAIGB cDNA, where upon the addition of composition and treat disorders by gene therapy. The pTH responsive gene may be constitued disorders, e.g., osteoporosis. This sequence represents a PTH CC responsive gene protein of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a method of characterizing acute myelogenous leukemia (AML) in a patient by assaying for the overexpression of one or more BAALC transcripts in cells obtained from the patient, where an overexpression indicates that the patient has an aggressive form of AML. The methods, kits and probes are useful for characterizing acute or chronic myelogenous leukemia, or prostate cancer. They are also useful for detecting BAALC overexpression. This sequence corresponds to a BAALC (Brain and Acute Leukemia, Cytoplasmic) protein encoded by an alternative spliced RNA consisting of exons 1, 6 and 8.

The methods, kits and probes are useful for characterizing acute or chronic myelogenous leukemia, or prostate cancer. They are also useful for detecting BAALC overexpression. This sequence corresponds to a BAALC (Brain and Acute Leukemia, Cytoplasmic) protein encoded by an alternative spliced RNA consisting of exons 1, 6 and 8.
                                                                                                                                 New polypeptide human dioxygenase 10.12 and polynucleotides encoding polypeptide, useful for treating various diseases, such as malignant tumors, inflammations, immunological diseases, hemopathy and HIV

           The invention relates to a novel PTH responsive gene (PAIGB) fragment encoding a polypeptide. The invention further comprises: a chimeric construct comprising the isolated nucleic acid fragment operatively linked to suitable regulatory sequences; a host cell transformed with the chimeric construct; a vector comprising the nucleic acid fragment; obtaining a nucleic acid fragment encoding the polypeptide; a method for obtaining a polypeptide detecting the presence of the nucleic acid fragment; an antibody that specifically binds to one or more epitopes of a PAIGB polypeptide; a composition for regulating bone-forming activity in a mammal comprising the nucleic acid fragment; but that alters the expression of PAIGB gene or polypeptide; determining whether an agent alters the expression of PAIGB mRNA; determining spents for effectiveness in altering expression of the nucleic acid fragment. According to the nucleic acid fragment.
                                                                                                                                                                                                                                Claim
                                                                                                                                                                                                                                                           New nucleic acid fragment encoding a PAIGB polypeptide, useful preparing a composition for diagnosing, treating or preventing related disorders, e.g., osteoporosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    dioxygenase 10.12, polynucleotides encoding this polypeptide, a DNA recombination process to produce the polypeptide and antagonist against the polypeptide. The present invention also discloses the method of applying the polypeptide in treating various diseases, such as malignant tumours, inflammations, immunological diseases, haemopathy and HIV infection. The present sequence is the human dioxygenase 10.12.

The PAIGB collaboration activation for diagnosing, treating or preventing bone related disorders by gene therapy. The nucleic acid is useful in preparing a composition for diagnosing, treating or preventing bone related disorders, e.g., osteoporosis. This sequence represents a PTH responsive gene protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

         The invention relates to a method of characterizing acute myelogenous leukemia (AML) in a patient by assaying for the overexpression of one or more BAALC transcripts in cells obtained from the patient, where an overexpression indicates that the patient has an aggressive form of AML. The methods, kits and probes are useful for characterizing acute or chronic myelogenous leukemia, or prostate cancer. They are also useful for detecting BAALC overexpression. This sequence corresponds to a BAALC (Brain and Acute Leukemia, Cytoplasmic) protein encoded by an alternative spliced RNA consisting of exons 1, 6 and 8.
                                                                                                                                                                                                                        Characterizing acute or chronic myelogenous leukemia, or prostate cancer in a patient comprises assaying for the overexpression of one or more BAALC transcripts in cells obtained from the patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a method of characterizing acute myelogenous leukemia (AML) in a patient by assaying for the overexpression of one or more BAALC transcripts in cells obtained from the patient, where an overexpression indicates that the patient has an aggressive form of AML. The invention relates to a novel PTH responsive gene (PAIGB) fragment CC encoding a polypeptide. The invention further comprises: a chimeric CC construct comprising the isolated nucleic acid fragment operatively CC linked to suitable regulatory sequences; a host cell transformed with the CC chimeric construct; a vector comprising the nucleic acid fragment; construct; a vector comprising the polypeptide; a mucleic acid fragment; construct; a vector comprising the polypeptide; a matched for cotaining a nucleic acid fragment encoding the polypeptide; a composition for regulating bone-forming activity in a mammal comprising the nucleic acid fragment, polypeptide; a composition for regulating bone-forming activity in a mammal comprising the expression of PAIGB gene or polypeptide; a creening agent alters the expression of PAIGB mRNA; cc screening agents for effectiveness in altering expression of the nucleic acid fragment; screening for agents useful for treating bone related cd disorders; a valuating the efficacy of a treatment of a bone related cd disorders; a transgenic animal comprising the DA; an animal model cor the study of bone density modulation comprising a first group of animals; studying an effect of PAIGB on bone disorders; identifying whether an agent which has bone forming activity, and a stably transfected cell line comprising two constructs, the first construct comprising a ligand binding domain which is linked to an activation domain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New nucleic acid fragment encoding a PAIGB polypeptide, useful preparing a composition for diagnosing, treating or preventing related disorders, e.g., osteoporosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Homo sapiens

                                                                                                                  Query Match
                                                                                                                                                                                          all of which expression is driven by a constitutive promoter, the second construct comprising multiple copies of DNA binding elements linked to a minimal promoter which is linked to PAIGB cDNA, where upon the addition of chemical inducer, transcription of PAIGB gene is induced. The PAIGB polynucleotide has osteopathic activity. The PTH responsive gene may be used to treat disorders by gene thrappy. The nucleic acid is useful in preparing a composition for diagnosing, treating or preventing bone related disorders, e.g., osteoporosis. This sequence represents a PTH responsive gene protein of the invention.
                                                                                                                                                         Sequence 54 AA;
